

Earth Energy

By Denette France

We are surrounded by energy, man-made, from the Earth and from outer space. All of it affects us but not all of it is good for us. Here lies the problem, how do we know which is and which isn't?

The first problem is getting some people to understand that this is energy and recently acknowledged by the scientific community as quantifiable. Unfortunately this hasn't always been the case and people who can sense it have been ridiculed for their acknowledgement of it in the past.

What follows is part of my own personal journey to understanding. I hope it will help those who have children who are sensitive, belonging to the crystal or indigo vibration or who are themselves sensing their environment in other ways.

This energy is found absolutely everywhere. Some scientists call it dark matter, which is causing the universe to expand. Others call it by other names. It is neither good nor bad and therefore it is how it is used which is dangerous. *'May the force be with you and don't be seduced by the dark side!'*

I have been described as a sensitive. Sensitive, that is, to energy. Any energy it would seem can affect me and not always favourably. It can and often does make me feel quite ill.

The way I feel gives me that all-important clue as to what I am picking up. But I have to be careful of what I tune into as

it can make me feel out-of-sorts for quite some time.

When this happens the only cure is to move house, leave the public building or supermarket; or plug something into the mains to neutralise the man-made or Earth-made energy. We need this energy to nurture and feed us but the best energy feels like nectar and does not make you feel as though you have a hangover.

The majority first come into contact with bad energy when they buy a new house.

Ley lines cause no end of trouble when houses are built on them. This is one of the reasons why some houses are put on the market repeatedly. Others have bad luck when they move into their brand new luxurious dream house or you find that the families who move in are always ill whilst they live there.

Part of this problem is caused by the natural land drains being crushed by machinery in the earth moving process of building. Watercourses find new routes through and across the land, which in turn causes problems with the energy above ground where people are now living.

Water crossing a ley line magnifies this effect. Water of itself absorbs energy if left to roam and find its own way down hill. If channelled and diverted it is no longer able to charge from the earth. It is called dead water. Water in the correct place, volume and structure produces energy, which is compatible with us. Waterfalls are like this. An analogy is minerals. We cannot absorb the minerals from soil or rock unless a plant has transformed them into plant tissue and mixed with it vitamins to enable absorption. So eat plenty of energised food.

Plants also have a better nutritional content if harvested where they choose to grow. When we stopped being hunter-gatherers and started growing food

where we lived our whole disease patterns changed, as did the energy patterns in the foods we grew.

Our ancestors knew much more about energy than we have remembered today. They knew of the significance of this energy and placed standing stones on converging underground streams to mark them out. These stones are sometimes called twisle stones because when you stand, facing them and place both your palms on them you get thrown off to either the left or the right. It is interesting to note that Oak trees either have left or right spiralling sap uptake. The left spiralling Oak is most likely to be struck by lightening and of course they grow on slow dense energy. Good for the slow growing wood but bad for us.

An Oak tree was struck by lightening in August 2003 four doors down from our house. It split it from top to bottom in a left spiral. Other Oak trees near by were taller which dismissed the myth that lightening always strikes the tallest object.

You must also consider the vibration harmonics associated with structures. All structures have their own resonance and this includes all life forms as well as buildings. If your house is not built with balance and harmony in mind it will have a discordant vibrational harmonic.

I know of people who have added extensions and conservatories only to find that the house is now out of balance. The new extension is not in harmony with the old. We experience this all the time when we change a worn part on a car for a new part. The vibrational frequency is out of balance and other components then break down. The car is no longer at-ease (in harmony) but in dis-ease (dis-harmony).

Living organisms, plants, animals, humans etc are affected in this way by our location on the Earth. The natural background energy influences how we feel, as does the visual impact. Food also

has an energy frequency and it is this energy we can identify which tells us what we fancy. If we are taking a good food supplement, we eventually get to a point where we are hungry but do not know what for. We do not fancy anything. Compare this with a pregnant woman and she knows exactly what she wants even if it is Choc-ice and Chips or coal!

A woman who is approaching her period will crave chocolate because she needs the chromium and vanadium within this confectionery. She is consciously unaware of this but it does not matter her instinct is such that she knows that she MUST have it to support this stage in her physical Cycle!

The energy of food is linked with baby's growth and food preferences. They know even at this young age what they need and so they will eat what they need for areas, which are developing. Once these have developed the rest of the body has to catch up so other nutrients are needed in other food. The energy in this food is transferred to the part of the body it is needed to build. The energy of the country and region it grew in is also part of the energy.

Another way to look at it is like this. You can have a succession of cars coming off the track at any major car-producing factory. They are the same make and identical in every way, except for perhaps colour. When they tune the engines they all tune up differently. How is this possible when they all have identical working parts?

I look at the energy from the area that the raw iron Oxide was extracted from for each component and the energies of the workforce doing the assembling. All of this is a contributory factor to the harmonising of the whole vehicle.

It can take about three to six years for this disturbed energy to normalise in houses. Ley lines, which have been damaged by

the modern building process, also have to heal. It is when you purchase a house by looking at a site map and choosing a plot that you play Russian roulette. You have no idea what you have let yourself in for.

Ley lines are found all over the world and are called by different names. In Ireland they are called Faerie paths and in China and Japan they are called Dragon lines. Ill health and misfortune befalls those who live on these sites and this was the reason for the practice of Feng Shi.

In Japan they do not consider building without first consulting a specialist in these matters. It was, and still is, considered foolhardy to build a business on such lines because it would be doomed to failure, as indeed would the health of the workforce

The Chinese also have acupuncture, which is the study of energy meridians, which cross our body and transport energy around it. It is electrical energy and the acupuncture points can be detected with a voltmeter. So too is the body of the Earth. She is no different and should be respected. Greed and profit coupled with ignorance is what does the most damage to the Earth and us respectively.

It is interesting to note that accident black spots often have a ley line crossing them. Some authorities have turned to Feng Shi in order to neutralise this effect and it has been successful. Why then do these people not consider the consequences of building without first looking at the ground?

In England churches which are 500 years and older are often built on old ley lines. Not because the builders of these churches knew this, but because the site itself was an old pagan site of worship and ritualistic celebration. These or older civilisations knew about the power of these lines which criss cross the land. They even go out to sea as they

circumnavigate the Earth. If you have the ability, examine the ley line and look at how it has been opened and the energy brought up into the crypt. No human has the ability to open these energy lines. I for one find some churches quite emotional places where tears readily fall for no reason.

The churches, which are of particular significance, are those that are built on these lines. They are significant because there are dragons as gargoyles carved in stone on their ramparts. Interesting when you remember that the energy lines are called Dragon paths in China and Japan! Also you have to be aware that these energy lines link others all over the world and some of the major sites are places like the great pyramid in Egypt, Luxor, Stone henge etc.

Energy from the Sun

What is also important is that when the Soho telescope is recording solar activity of a significant magnitude it takes more pictures than when this activity is insignificant. At the peak times of maximum solar activity they also record unidentified moving anomalies. This has now been referred to as space traffic in the area close to the solar flare. This increase would, it seems, indicate interdimensional occurrences and time slips. At first it was considered to be a mark on the lense but on closer examination these bright luminous lights are recorded on the full colour and monochromatic telescopes which work together and show their progress across space.

The electromagnetic energy increase on the sun is also linked with UFO sightings on Earth over Ley lines and we know that gravity and time are interlinked. That is the further away from the Earth's gravity we are the less you age because time for the traveller in space slows down. If we are to make the jump here to *light speed*, then we have to ask ourselves, 'have our ancient church builders left us clues in the buildings themselves?' The dragons of

old, St. George who slayed the Dragon. The reptilian agenda etc all begins to make some sense but there are still pieces of the jigsaw yet to be placed.

I found out by accident that what I experience on ley lines is electromagnetic energy. I found this out when I went into the outside room of an MRI scanner whilst on a photo shoot with my husband Paul. The room is lined with led and the glass has thin led filaments running through the glass. I didn't feel well in the outer chamber, but when the nurse opened the vault-like-door to the room which housed the scanner, I felt as if I was standing on a ley line only ten times worse. I have never felt this bad when crossing any ley line.

This led me to conclude that It is the Earth's magnetic field, in concentrated paths, which we call ley lines. They make me feel incredibly giddy, unsettled, a bit like being on a lift going down. This to me is bad energy because of how I feel and how tired or drained I am afterwards whilst standing in these areas. I have to shut down and recharge.

Bare in mind I feel like this on *bad energy* ley lines. These are tainted, usually due to human intervention, building and for other reasons, currently I am unaware of. Good energy gives me lots of energy and I feel marvellous. However, mobile phone masts are generating energy output, which is not in harmony with the Earth nore the people who live by them.

Please note that these masts act like giant acupuncture needles much like the stones in stone henge, Castlerige stone circle and Avebury. These sites take energy from you.

David R. Hawkins, MD., PhD. Notes in his book '*Power VS. Force*' that some people test strong to negative or bad energy and weak to positive or good energy. He uses Kinesiology as his method for testing this. His book is orchestrated around the

scientific study of the kinesiology testing of people for all sorts of reasons.

This answered my question when touring the crop circles with a group about two years ago. I was amazed how many people gravitated to the circle, which had *bad energy*. I had a headache start the instant I set foot in one of them and felt my energy dropping.

We are electrical beings, so it is no surprise when in these areas our batteries drain and we feel tired. Those people who get energised in these bad energy centres cannot understand why the rest of us have no stamina. Or why our batteries to cameras and mobile phones drain.

Lines, which are clean and unadulterated, are like nectar. They energise, and with this energy comes the ability to heal. Not just yourself but with a source which is strong you are capable of discharging and recharging your energy levels.

Obviously you have to understand the energy in order to do this safely. In my experience many people don't and this makes them ill. I have come across many people who have had to stop **spiritual** and **faith healing** techniques because it has made them too ill to continue.

They are taught it is not their own energy, which is used to heal, but channelled energy from god or healing spirits. If we are to believe what the bible says and that is that God is everywhere and within us then let us be aware that we get our energy from our surroundings, from the Earth and from inner and outer space. You can call this energy God.

When we use this energy by healing others we need to charge our depleted batteries. Where do we get our energy? Food we know gives us a specific energy like putting wood on a fire. Healing energy or energy for our spirit comes from the environment or we take it from one

another. (The soul cause of all human conflict is the taking of energy illegally.)

This soul energy is what mingles with physical energy and when controlled enables a woman to lift a car off a child without hurting herself. It is the same energy martial art experts teach their pupils to tap into, in order to break wood or stone without breaking the bones in their hands.

We are all energy beings. The energy, which is created by music, is a good example of this. If you go to a disco and they play low energy music it is easy to sit and drink all night. If they play high energy music you cannot sit and drink all night because you cannot sit still. You get up and dance all night. You do not feel tired because you have not used your own energy, you have used the energy created from the resonance from the music. Frequency and harmonics is all important, as is compatibility. This is why such a wide range of taste in music.

The Energy of Sedona

I visited Sedona last year as part of a trip that lasted 26 days and was wowed by the natural beauty of the area and the famous vortex energy. About 40 miles from Sedona, both Paul, he was driving, and I became so tired we had to stop and have a 20-minute kip in the car. Neither of us could stay awake!

When we arrived in Sedona the energy was so much, I wondered if it was draining the surrounding countryside in order to concentrate the energy in the vortexes. This energy is subtle but strong and therefore difficult to control. So be aware if you visit, that you may end up having a row with a loved one, which happened to us totally out of the blue.

As our time there was short, we only had about eight hours to explore but I found a tourist information centre, which had, maps detailing all of the vortex sites. So we went to the Airport vortex as it offered spectacular panoramic views 365 degrees of the whole of this majestic Place.

The energy in Sedona varies and had a peculiar feel to it. At times you felt as though you were on a lift going down by about a foot and then stopping and going back up by 3 inches. I also felt this way in Laughlin and at first thought it was the hotel or just me but other people were experiencing the same thing. I thought fine At least I am not going mad!

In the Airport vortex energy you feel calm and at one with the universe. You also feel heavy whilst calm. I have felt this way in other places not just in Sedona. It is a beautiful place, which catches you unawares. Your emotions in this place are often difficult to keep in check.

We left the vortex, reluctantly having sat and absorbed the energy for at least an hour maybe more, and were drawn to finding lunch. Having decided on Mexican cuisine we found a suitable restaurant with incredible views of the orange rocks, glowing on the skyline and I started feeling quite emotional, I was in awe of the place, the magnificence of the sandstone rocks and the way the Earth in her own emotional state had landscaped herself. I watched the way the sunlight caught the rugged shapes and constantly repainted the terrain. It was truly mesmerising. I spent the first hour glued to this spectacle whilst struggling to stop the tears falling. So connected with this place I had become lost within its landscape and its soul. However, on a more practical level I also feel like this in some churches back home.

It has been almost 12 months since my visit to this incredible place and wondered how I could explain its effects

on me without people thinking I was completely mad.

I met, as so often happens, a couple of Americans, on holiday in Glastonbury at last years Crop Circle symposium. They were on holiday and not at the Symposium at all and just happened to be sat at the table next to ours in 'The Who'd A Thought It' Public House. We got chatting and guess where they lived? Yep, Sedona! She was studying Homoeopathy (energy medicine) so we had a lot in common and we chatted about the energies of Sedona. The first time they ever visited they had a blinding row just as we had done and she explained that it is common for visitors to experience this.

This was my first confirmation of my experience and then I read the latest edition of Nexus Magazine and thought, at last I have a scientific basis for what I feel whilst in these places.

Benjamin Longtree is an electrical Engineer and uses sensitive instruments to tune into, record and analyse the Earth's electromagnetic signals and notes that our ancestors were much more attuned to these subtle vibrations than we are today. He does however conclude that the electromagnetic energy was stronger in our distant past and was not diluted by ELF signals which pollute our current environment.

Using his equipment he is able to demonstrate this effect. When our brain is functioning restfully in the predominantly alpha-theta zone, we become more relaxed and peaceful. The human brain acts like an electrical circuit called a *phase locked loop*. A local external electromagnetic signal, as long as it is stronger than our brain waves, initiates a resonance effect where the brain locks onto and resonates with that frequency.

He proved this theory by simultaneously observing and recording the first resonance along with local field

geomagnetic activity using the fluxgate instrument, while the equipment and he were located in a Sedona vortex, which later proved this theory. What others have described from inconclusive evidence he is able to demonstrate conclusively. You can see his graphed results in his online book.

<http://sidereal7.org>.

He also states that magnetite is found in rich deposits within Sedona itself as is iron oxide all of which are great conductors of electricity. Women pick up this electromagnetic energy easier than men because they have higher-than-normal levels of magnetite in their inner-ear fluid as was found in 80% of the tested subjects

The native American Navajo refer to Sedona as being where '*the Earth speaks*'. Depending on the amount of Magnetite you have in your ear fluid depends on whether you are able to hear her. This is perhaps why I feel giddy in these areas at times because of the magnetism of the Earth being magnified and pulling the semicircular canal fluid peppered with the magnetite?

The article by Benjamin Lonetree entitled '**The Siren Song of the Earth**' tells all and in much greater detail than I have space for here, but it is a fascinating article which covers the phenomena a lot of us experience but do not know why.

My only regret in visiting Sedona is that we did not have longer to explore the other vortex points. Sedona itself is on a geographical fault line and is a UFO hot spot. Hardly surprising considering the ley lines which criss-cross the area.

The drive into it takes you down a steep canyon, which follows the fault. Earthquakes in its geological past have raised the Southern canyon wall and

dropped the Northern. Strange Earthlights are common over such regions the world over.

One of its famous peaks is called Thunder Mountain due to it being struck repeatedly during the rainy season round about August time. Walt Disney used to live here and thunder mountain features in his film *Fantasia* where Mickey Mouse climbs Thunder Mountain and conducts the lightning at the top with his wands. It truly is a magical place.

The refugees from the sunken continents of Lemura and Atlantis are reported to have settled in scattered locations all over the world and those from Lemura made this their home.

It is reported that under Boynton Canyon there is an alien base and this is one of the reasons for so many sightings.

When we left Sedona we stopped and shut off the car headlights and looked at the night sky. No cloud or smoggy haze and no light pollution from civilisation detracted or muted the best night sky I have ever seen. Orion, so easy to identify in our English skies, was lost due to the astonishing number of other stars in and around, this normally easy to identify constellation back home.

I was amazed at how easy it was to see the Milky Way running to the left of the Orion constellation and it reminded me of Graham Hancock's book *Heaven's Mirror*. With no light pollution in those days, how on earth did they identify Orion with all these other stars? Unless of course they were told that this was the home of some of the gods. Others living in the Pleiades?

Circumstances have conspired with fate and we will not be going back to Sedona this year but maybe next. I want to sense those other vortex's and see if they are all the same or different.

It is at times like this that I wonder what the energy on Mars and other planets

feel like. Do they feel the same as Earth or do they have their own characteristic feel? Do they speak a different language? Would we be able to understand it? Or would it feel familiar as we perhaps return home?

To Conclude

Generally science has now explored the spaces, which separate all matter at the molecular level, and concludes that all they find is energy. Our solid world is not solid but fluidic and it is only the vibration of these molecules that determine whether substance appears solid or not.

Resonance, frequency, harmonics is the vibration of energy. A volcano that is about to erupt changes its harmonics within the magma chamber. The Earth speaks to us. We should learn to listen.

The research done by Dr Lee H. Lorenzen who is a Doctor of biochemistry at the University of California in Berkeley became a water researcher developing 'micro-cluster water' (or Magnetic Resonance Water). This technique was being used to study homoeopathy. Dr. Masaru Emoto is a doctor of alternative medicine and took this technique of freezing and looking at water molecules back to Japan in order to study our environmental influence on water.

His book called '**Messages from Water**' is an inspirational work, which is awesome. For the first time we can actually see how our emotions have an effect on the water, which surrounds us. He shows us the effects our spoken words have on water by photographic evidence of samples, which have been frozen after exposure.

We can see the shape and colour of the frozen water crystals, Chandeliers in frozen crystal form with prismatic effects in response to words such as fennel and chamomile, beautiful, love and angel. The crystals mimic the shape and sometimes the colour of the plant or flower whose name has been spoken at

the water in a test tube. Likewise words such as Devil and hate show dark incomplete crystal formation or no crystals at all just random confusion.

His book is published by Hado ISBN 90807 42103-9

One of the best ways to extinguish all life is by using nuclear weapons. Radiation kills. It changes the genetic code recorded within the water of the egg and sperm. This is where genetic memory is stored. It alters the coded information within life itself leading to mutation and disease. Is there a connection with the black triangles timely appearance over countries that have developed nuclear potential or have acquired them by other means.

In 1947 Kenneth Arnold witnessed a formation of strange craft and his description to the press of his account gave birth to the term flying saucers.

In that same year the Roswell crash occurred near to where the Worlds first nuclear bomber squadron was based.

The 509th (Unfortunately made famous for dropping the bombs on Nagasaki and Hiroshima).

December 1980 women were camped on Greenham Common campaigning against America using England as an Aircraft Carrier during the Cold War and protesting against nuclear warheads being stored there.

Interestingly though they were kept at RAF Woodbridge & Brentwaters which saw the British equivalent of a Roswell event.

Larry Warren and Peter Robbins book 'Left at East Gate,' gives an eye witness account of the incident as it unfolds. ISBN 1-56924-668-8

The Chernobyl disaster reported a UFO, which hovered over the sight for several

hours prior to and long after the explosion, which did not go nuclear. This has puzzled scientists for years because they cannot understand why it did not destroy half of Europe?

Indiandaily.com reports sightings of unknown triangular craft since the country went nuclear. The children in that region now speak with each other using a sign language only they can understand but cannot teach adults.

Perhaps it is now possible to determine where nuclear silos hold intercontinental ballistic missiles?

Watch the skies and if strange black triangular objects have started appearing ,write to your local MP saying you do not want anything Nuclear in your back yard.

It would be interesting to see what reaction you get!

Perhaps they are protecting us from our own stupidity. Perhaps we should act like adults and stop playing with fire, and respect ourselves enough to stop eradiating ourselves using x-rays and producing nuclear bombs and plutonium tipped ammunition shells etc.

We have already seen the devastating results of Gulf war syndrome through an unlicensed vaccination program and the eradiated areas of desert, which are now *hot*. Is humanity hell-bent on destroying the Earth or just itself?
