

## LOOK INTO THE SKIES AND SEE...

Kathy Dickman (above with fellow UFO researcher) has clocked up more miles than most politicians in her quest for the 'The Truth'.

I have been privileged to speak in many different countries during my promotion of the UFO subject and one friendly face that was ever present whether there be 1200 or 20 people in the audience was Kathy from Oz.

Over the years Kathy has also had her share of encounters, most people are lucky to see something strange in the skies maybe once in their lifetime but Kathy is one of those lucky people who always seem to be in the right place at the right time.

In April this year Kathy was on her travels when suddenly a bright object in the daytime sky caught her attention. She was without camera or camcorder but quick thinking she remembered her mobile phone had a camera facility so she used that and captured this image.

*"The object was seen about 6pm on the 25th April at a place called Victor Harbor, which is about 2 hours drive south of Adelaide. The object was just hovering low, in front of a cloud mass."*  
Kathy.

The following images have been compared to the infamous Carlos Diaz images captured in Mexico a few years ago.

*When in Nevada visiting the International UFO Congress earlier this year I was interviewed by Mexican TV reporters regarding the plasma craft.*

*It will be shown on TV over there. A comment was made regarding the similarity of the craft to that photographed by Carlos Diaz.*

*Although, I think mine was a much closer encounter...*

Coincidentally. My journey back from Laughlin to Adelaide involved a stop over in Fiji

It was there that Kathy captured these two images.

There does seem to be movement when looking at the objects relationship to the central valley this could also be caused by the camera position moving. The image shows no discernable detail other than the object appearing to be a bright light source but what ever it is it's there.

Again in April of this year Kathy has reported yet another encounter.

Kathy owns a beach house and was down there enjoying the warm night air when at around 8pm she noticed an unusual light.

Kathy describes this as an orb, it wasn't any star has it appeared to moving left to right and then back on itself to the right.

She reckons it was about 500 mtrs away from the house over flying the tree tops.

The image does appear small on the photographs but the camera Kathy used does not have a zoom.

There was a lot of dog barking going on in what is normally a very quiet area.

As soon as I took a shot of the object another object zoomed in from nowhere. I Watched the initial object for 15-20 mins. It just kept moving very low from right to left.

These object where filmed out in the open and not through glass, hence ruling out the possibility of a reading lamp or similar being reflected on the windows.

I am sure that we hear and see more from Kathy over the coming weeks and on behalf of ufodata we thank Kathy for sharing her unusual images and experiences with us.
