

Kathy Dickman is a well travelled lady in fact in ufological terms Kathy is becoming the 'Alan Whicker' of the UFO community. Never shy to ask about local opinion or experience Kathy is developing quite a knack for getting information from some very unusual places.

Here Kathy reports on her recent trip to Mongolia.

When I visited the Gobi desert last week, through an interpreter, I asked the people if they knew anything about unusual lights in the sky, they didn't

know what I was talking about. I then asked if they heard of Ovni's or UFOs , again it drew a blank...Only when I showed them some pictures taken last year, of a plasma type craft near my home, the response was..." do you mean people from other worlds who visit here?'

They are well aware that they have been visited many times, they then started to relate to me an event a few years ago, where a craft hovered just a few feet from the ground in the desert at night.

They told me also that there were humanoids on board...Very tall, maybe 10 ft... I asked if these ' people ' conveyed a message at all, they told me that they appear to people all over the world but only to ' higher thinking people and those who are aware'...

Interesting indeed, seeing as these people are totally isolated, have no TV or mobile phone and have not been exposed to glossy UFO magazines....

Their minds have not been sullied by such images. So, we have a very intriguing event which occurred in the

desert a few years ago. This also was seen on the outskirts of the capitol of Mongolia. The exact same event was witnessed by many people, even the description of the humanoids was the same.

So, we have a race of nomadic people, who are totally cut off from the outside world, relating to me that they are fully aware of civilizations through out the universe.

I found this information stunning, to say the least.

After leaving Mongolia, I visited Beijing, China. This vast, capitol city containing about 18 million people, are fully aware of the phenomenon of UFOs and many events were given to me..

You may recall Prof Sun Shi Li, from Beijing lecturing on the existence of ovnis in China and the many credible reports given to the media, who I might add, do not pour scorn and derision on the subject, unlike western countries
